

Tabellenbearbeitungstools im WYSIWYG Editor aktivieren

Das klappt ganz einfach mit folgendem Code:

```
<script>
  window.addEventListener('editor-tinymce::pre-init', event => {
    // Get the config object
    const mceConfig = event.detail.config;

    // Create a secondary toolbar for table editing
    mceConfig.toolbar = [
      mceConfig.toolbar,
      'table tablecellprops tableinsertdialog maketableresponsive | tablemergecells
tablesplittings | tableinsertrowbefore tableinsertrowafter tabledeleterow | tablecutrow
tablecopyrow tablepasterowbefore tablepasterowafter | tableinsertcolbefore tableinsertcolafter
tabledeletocol | tablemergecells tablesplittings | tablerowheader tablecolheader |
tablecellbackgroundcolor | tabledelete'
    ];

    // Modify the table context toolbar
    mceConfig.table_toolbar = 'tableprops tabledelete | tableinsertrowbefore
tableinsertrowafter tabledeleterow | tableinsertcolbefore tableinsertcolafter tabledeletocol |
tablerowheader tablecolheader';

    // Make tables responsive by default
    mceConfig.table_sizing_mode = 'responsive';
  });

  window.addEventListener('editor-tinymce::setup', event => {
    // Get the editor
    const editor = event.detail.editor;
```

```

// Add a button to make tables responsive
editor.ui.registry.addButton('maketableresponsive', {
  tooltip: 'Make Table Responsive',
  icon: 'maketableresponsiveicon',
  onAction() {
    let tableElement = editor.selection.getNode();
    while (tableElement.nodeName !== 'TABLE') {
      tableElement = tableElement.parentNode;
      if (tableElement.nodeName === 'BODY') { return; }
    }
    tinymce.DOM.setStyle(tableElement, 'width', null);
    const colGroup = tableElement.getElementsByTagName('colgroup')[0];
    const cols = Array.from(colGroup.getElementsByTagName('col'));
    cols.forEach((child) => {
      tinymce.DOM.setStyle(child, 'width', null);
    });
  }
});

// Register a custom icon for maketableresponsive
editor.ui.registry.addIcon('maketableresponsiveicon', `

```

Das Ergebnis sieht dann wie folgt aus:
